

Bytes People Solutions:

Using technology to enhance training

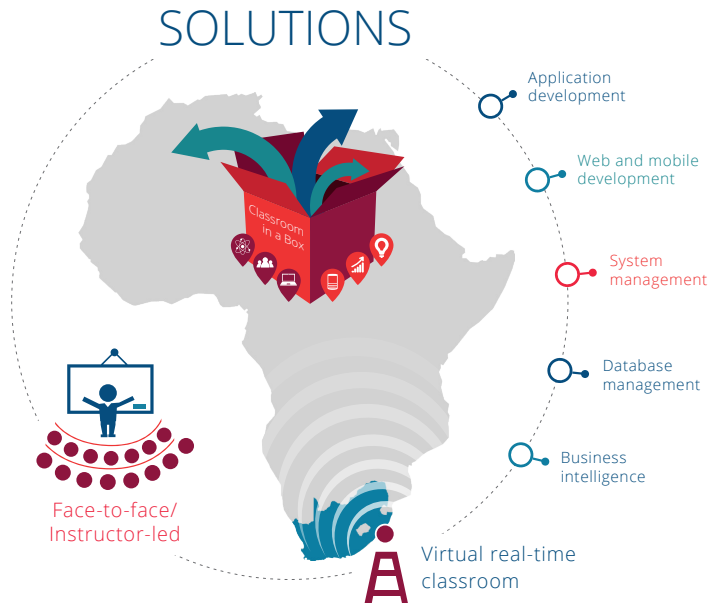

At Bytes People Solutions we believe in optimising your return on investment in training by ensuring that your employees receive meaningful and relevant knowledge and skills transfer in an efficient and effective way.

Our experience in effective training and development solutions led to the design of training offerings that start with an initial assessment in order to provide customers with carefully considered training recommendations. We develop learning paths for your employees that serve as a basis for the creation of clear, structured career paths that help them to evolve into knowledgeable, skilled and productive employees.

In order to execute our training services offering, Bytes People Solutions operates in partnership with some of the most established technology vendors in the world, including Citrix, CompTIA, Microsoft, Oracle and VMware. Each of these vendors addresses various competencies, such as application, web and mobile development, system management, database management and business intelligence. With these vendors on board, the list of offerings from Bytes People Solutions is extensive.

Our solutions are delivered through three primary mechanisms:

- **Face-to-face/Instructor-led:** This form of training is undertaken at Bytes People Solutions' offices in Midrand, Durban, Cape Town and Pretoria.
- **Virtual real-time classroom:** This training takes place virtually and in real time. Live instructor-led training programmes are offered to participants, who are able to see and hear the instructor, interact in group discussions and receive immediate assistance at various locations.
- **Classroom-in-a-box:** This training solution involves Bytes People Solutions transporting its training offerings to our customers to be delivered at their own sites across South Africa and Africa.

Our virtual classrooms enable us to provide far greater access to training on specialised products. This results in an increase in the number of skilled and certified professionals in the ICT industry, which is critical for the industry's ongoing development in South Africa and across the continent. The use of this technology also lowers the costs associated with face-to-face interactions.

Whatever your training requirements, Bytes People Solutions is available to help your employees reach their potential through exceptional partnerships and leading technical innovations.
